

ProofID Dashboard

ProofID Dashboard offers a simple, secure, and cost-effective way to consolidate and monitor Ping Identity products. With ProofID Dashboard, you get an intuitive, at-a-glance summary of your environment.

Situational awareness of Ping products

In a world awash with data, it's important to filter information for your organisation so it can be easily digested to support informed decision making. ProofID Dashboard is an at-a-glance summary providing near real-time situational awareness of your overall Ping environment, including PingFederate, PingID and PingAccess. ProofID Dashboard helps executives, project leaders, and operations teams understand usage trends of the core applications being offered to employees, partners and customers. With ProofID Dashboard, executives can rapidly generate the statistics needed to govern business decisions.

An early warning system for potential issues

Having highly available systems is the goal of any organisation supporting the user community. The intuitive interface allows operations teams to monitor the health and status of Ping Identity products to know when issues may be occurring and to proactively take action and avert any downtime.

Easily create audit trails

Create an audit trail to track all of the activities related to a specific user, or simply create an audit trail for the system over a specified period of time. The audit trail will show every action with respect to login, logout, and password changes that auditors can utilise as part of their inspection of the system.

Benefits of ProofID Dashboard

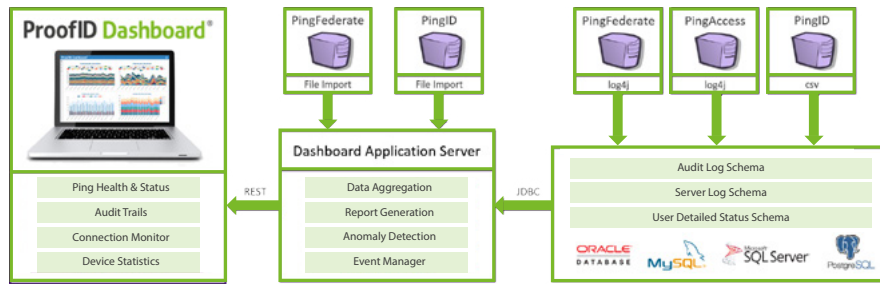

- Provides instant visualisation of your Ping Identity environment
- Reveals trends to enable proactive analysis and configuration
- Presents key indicators in an intuitive, quick to read format
- Generates audit trails for specific users
- Generates reports for application usage based on users or time

ProofID Dashboard

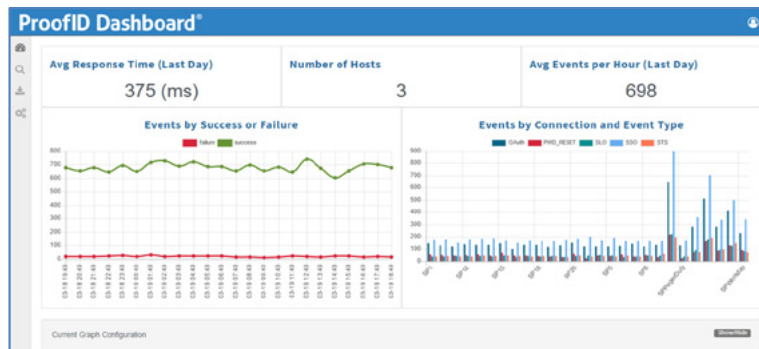

How it works

ProofID Dashboard is an easy to install, quick-to-value solution that provides a simple, secure, and cost-effective way to monitor Ping Identity product activity. Data can be imported directly into the ProofID Dashboard application server, or data can be securely read from a relational database that has been configured to receive Ping Identity product events. ProofID Dashboard aggregates data, performs processing, and ultimately builds intuitive displays for users within a single display, as well as support for drill down into details of information.

Getting started

Having a dashboard showing key indicators of your Ping Identity environment is just a click away with ProofID Dashboard. Download and install in minutes, consume Ping Identity event data, and start viewing your PingFederate ecosystem operational information.

ProofID is an IAM Managed Service Provider (MSP) operating globally. Our team of identity experts are trusted by many Tier-1 enterprises to design, deliver and manage their IAM services. We manage millions of identities and deliver services to over 150 countries. All successfully delivered through our methodology driven IAM Managed Service.
